The above heatmap did not make it into my report but may suggest that schools with a higher share of Asian, White, and non-resident alien students tend to have a higher graduation rate, that schools with a higher share of Asian and non-resident alien students tend to have graduates with higher earnings, and that schools with a higher share of Hispanic students tend to have graduates with more debt on average.

# Perform the aggregation in Spark
state_earnings_df = df.groupBy("STABBR").agg(
    avg("MD_EARN_WNE_P10").alias("avg_earnings")
)

# Convert the Spark DataFrame to a Pandas DataFrame
state_earnings_pd = state_earnings_df.toPandas()
```

[8]:
```
import plotly.graph_objects as go

# Ensure the average earnings are in a float format
state_earnings_pd['avg_earnings'] = state_earnings_pd['avg_earnings'].
 ↪astype(float)

fig = go.Figure(data=go.Choropleth(

The above choropleth map also did not make it in my report, but offers insights into the states that have highest and lowest graduate earnings.

The above scatter plot did also not make it in my report, but suggests a slight positive correlation between family income and net price of public schools, as we might expect.

Private schools are most expensive compared to public schools in the following states: WY (2.88), HI (2.57), NM (2.52), CA (2.50), and WA (2.41).

Conclusions: - My findings suggest Black and Hispanic students are overrepresented in for-profit colleges. Further analysis should be completed to examine the underlying causes of this, that might include an analysis of socio-economic barriers to accessing higher education, geographic availability of institutions, and targeted recruitment practices of for-profit schools. - Along with having a higher representation of these two minority groups in for-profit schools, these institutions tend to skew toward families with lower income and pay their faculty the least compared to other schools. Graduates of these schools comparatively earn the least on average and they have higher levels of debt compared to public schools. This raises questions about the quality of education provided at for-profit schools and suggests that these institutions might not be providing the same return on investment as other schools. - Where private schools are least economically accessible compared to public schools are in Wyoming, Hawaii, New Mexico, California, and Washington, suggesting that in these states families with a lower income may opt for public schools. The relative economic inaccessibility of private schools in certain states suggest that public institutions play a critical role in providing higher education to lower-income families.
